BFL_Payments_CopilotExcel_Participant_Guide

Copilot in Excel — Participant Exercise Guide

Formulas & Pivot Tables for Payments Operations

Bajaj Finance Limited | M365 Copilot Training File: `BFL_Payments_Copilot_Demo.xlsx` **Mode:** Copilot in Excel (Microsoft 365 Copilot licence). *Copilot Chat only? Use `BFL_Payments_Alt_Copilot_Chat_Participant_Guide.md` instead.*

Before You Begin

- Open `BFL_Payments_Copilot_Demo.xlsx` from **OneDrive**. Copilot in Excel needs the file saved in OneDrive or SharePoint with AutoSave on.
- Click the **Copilot** button (top-right of the Home ribbon) and keep the pane open for every exercise.
- The sheet `Payment Exceptions` has **25 exceptions**. Headers are in **row 2**, data runs from **row 3 to row 27**, and the data is as of **30 Sep 2026**.
- Columns **N–Q are intentionally blank**. You will fill them using Copilot. Column M is a blank spacer.

Column	Field	Column	Field
A	Exception ID	G	Resolved Date (blank if open)
B	Customer Name	H	Status (Resolved / Open)
C	Channel	I	Allowed TAT (days)
D	Amount (₹)	J	Owner
E	Exception Type	K	Partner
F	Reported Date	L	Customer Complaint

Exercise 1 — Formula Column: TAT Days (Column N)

Click cell **N3**, then type into the Copilot pane:

```
In column N, calculate TAT Days for each exception: the number of days from
the Reported Date (column F) to the Resolved Date (column G). If column G is
blank (case still open), count to 30 September 2026 instead. Apply it to all
25 rows.
```

What Copilot will produce:

```
=IF(G3="",DATE(2026,9,30)-F3,G3-F3)
```

✅ **Check:** Kunal Shah (row 9, open EMI refund) shows **28**. Aarav Kulkarni (row 3) shows **1**.

> **On live data:** use `TODAY()` in place of `DATE(2026,9,30)` so open cases keep ageing automatically. The fixed date is used here so everyone gets the same answer.

Exercise 2 — Formula Column: TAT Status (Column O)

Click **O3**, then type:

```
In column O, show "Breach" if TAT Days (column N) is greater than the Allowed
TAT (column I), otherwise "Within TAT". Apply it to all 25 rows.
```

What Copilot will produce:

```
=IF(N3>I3,"Breach","Within TAT")
```

✅ **Check: 12 Breach** and 13 Within TAT.

Exercise 3 — Formula Column: Compensation Due (Column P)

Click **P3**, then type:

```
In column P, calculate the compensation due to the customer: ₹100 for every
day that TAT Days (column N) exceeds the Allowed TAT (column I). If it is
within TAT, show 0. Apply it to all 25 rows.
```

What Copilot will produce:

```
=MAX(0,N3-I3)*100
```

✅ **Check:** the column totals **₹6,900**. The largest single amount is Kunal Shah at **₹2,100** (28 days against an allowed 7).

> **Try this:** "*Total column P by Channel.*" e-NACH accounts for ₹2,300 of it, and every one of its five exceptions is in breach.

Exercise 4 — Formula Column: Ageing Bucket (Column Q)

Click **Q3**, then type:

```
In column Q, show an ageing bucket for open cases only. If Status (column H)
is "Open": "Over 7 days" if TAT Days (column N) is more than 7, "4–7 days" if
it is 4 to 7, otherwise "0–3 days". If the case is resolved, show "Closed".
Apply it to all 25 rows.
```

What Copilot will produce:

```
=IF(H3="Open",IF(N3>7,"Over 7 days",IF(N3>3,"4–7 days","0–3 days")),"Closed")
```

✅ **Check:**

- **3 Over 7 days:** Kunal Shah, Meera Iyer, Varun Kapoor.
- **3 at 4–7 days.**
- **1 at 0–3 days.**
- **18 Closed.**

Exercise 5 — Ask Copilot to Explain a Formula

Click **Q3**, then type:

```
Explain this formula in simple terms. What does each part do, and in what
order does it check the conditions?
```

What Copilot will explain:

> "*It first checks whether the case is open. Resolved cases return Closed straight away. For open cases it checks the age from the top down: more than 7 days, then more than 3 days, otherwise 0–3 days.*"

> **Try this:** "*What does this return for an open case at exactly 7 days, and exactly 3 days?*" Because the tests are `>7` and `>3`, 7 lands in **4–7 days** and 3 lands in **0–3 days**.

Exercise 6 — Pivot Table: Amount by Channel and TAT Status

Click anywhere in the data, then type:

```
Create a pivot table on a new sheet that shows the total Amount for each
Channel, broken down by TAT Status (column O). I want to see which channels
carry the most value in breach.
```

What Copilot will produce:

- **Rows:** Channel
- **Columns:** TAT Status
- **Values:** Sum of Amount (₹)

✅ **Check:** Card (PG) carries the most value, **₹1,06,496**, of which **₹71,998** is in breach. e-NACH's full **₹26,300** is in breach.

Exercise 7 — Pivot Table: Owner Workload by TAT Status

Type into the Copilot pane:

```
Now create another pivot table showing the count of exceptions for each Owner,
broken down by TAT Status. I want to see whose desk has the most breaches.
```

What Copilot will produce:

- **Rows:** Owner
- **Columns:** TAT Status
- **Values:** Count of Exception ID

✅ **Check: Arjun Mehta (e-NACH desk) has 5 of 5 in breach.** That points to a process issue on the mandate file, not to an individual. Neha Kulkarni has 2 breaches out of 8.

> **If Copilot can't use column O:** the blank spacer column M can block range detection. Type `Spacer` into **M2** and ask again.

Copilot Prompts — Quick Reference

Task	Prompt to use in the Copilot pane
TAT Days	"In column N, days from Reported Date (F) to Resolved Date (G); if G is blank, to 30 Sep 2026."
TAT Status	"In column O, "Breach" if N > Allowed TAT (I), else "Within TAT"."
Compensation	"In column P, ₹100 per day that N exceeds I; 0 if within TAT."
Ageing Bucket	"In column Q, for Open cases: Over 7 days / 4–7 days / 0–3 days from N; else Closed."
Explain a formula	"Explain this formula in simple terms."
Pivot — value at risk	"Pivot: total Amount by Channel and TAT Status."
Pivot — desk workload	"Pivot: count of Exception ID by Owner and TAT Status."
Highlight	"Highlight rows where TAT Status is Breach and Status is Open in red."
Sort	"Sort by Compensation Due, highest first."
